문제와 해결방법

word2vec

이용자의 글을 받아서 글 내부 단어만 벡터화(CBOW)해서 유사한 단어를 볼 경우, 글에 자주 등 장하지 않는 단어의 경우 표현이 되지 않는다.

```
sentences = word2vec.Text8Corpus('test.txt')
model = word2vec.Word2Vec(sentences, sg=0, hs=1)
print(model)
for row in sentences: print(row)

'의망압니다.', '면와진', '완성에서', '생겨나게',
이나 '되고' '실습니다' '근유' '정보름' '경제조
```

KeyError: "Key '강함' not present"

→ 프로젝트의 목표가 이용자가 이용한 글에서의 단어간의 관계성을 분석하고 밝히는 것이 아닌 효과적인 유의어를 추천하는 것이므로 다른 대용량의 데이터셋을 활용할 필요를 느낌.

Wiki 데이터를 training에 활용

```

os 및 환경의 문제로 제대로 토크나이저가 작동하지 않고, 사전 훈련된 언어 모델이 효율이 좋다는 것을 알게되어서 이쪽으로 넘어가게 된다.

사전 훈련된 언어 모델(Pre-trained language model)

https://stackoverflow.com/questions/66952438/attributeerror-cant-get-attribute-vocab-on-module-gensim-models-word2vec한국어 pretrain된 모델을 구해서 넣는데, gensim에서 버전이 지원하지 않아서 3.8.3버전으로 내려줬다.

```
import gensim
model2 = gensim.models.Word2Vec.load('ko/ko.bin')
```

프로젝트 수행 중 새롭게 배운 점 및 느낀점

사전에서 제공하는 유의어를 사용자가 자신의 글의 문맥에 맞게 활용하도록 제공하고 싶다고 생각했는데, 이미 좋은 모델이 다양한 언어로 제공되고 있어서 활용만 잘해도 정말 괜찮은 결과가나와서 놀라웠다.

또한 이러한 임베딩 방식으로 키워드확장 및 의미찾기 정보검색에 많이 활용되고 있음을 알게되어서 흥미가 생겼다.

예상되는 프로젝트 점수
